The size of the set shall be configurable by the operator at time of set up without the need to modify the operating system. (Minimum of 8 columns) When the lifts are set up as a set, it shall be possible to operate any single column, a pair of columns or all columns together, at the same time.

Each column shall contain its own power supply, which consists of two deep cycle (group 31) 12 VDC batteries combined to provide a stable 24 VDC power supply.

The main power shall be fused between the primary power switch and the motor/control circuits to protect overload.

The 24 VDC on board power supply shall incorporate a built in recharging system with pictograph on the display so the operator can visually verify charging the system.

The recharging system shall be built in 110 VAC battery charger with indicator lamps. The battery charger shall be enclosed within a steel cabinet for protection from damage. The charger indicator lamp shall be easily visible through a sight glass mounted externally in the control cabinet. The indicator lamp shall be illuminated steady red when the system is recharging, green when batteries are fully charged, and flashing green when the charger is providing a trickle charge.
